

SYLVANIA

Large Lamp Catalog

Light. Made Right.

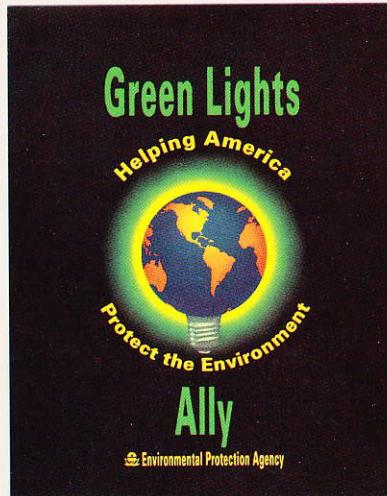

"Light. Made Right.TM" is our commitment to you.

It encompasses the philosophy that has made Sylvania Lighting an industry leader in providing not only innovative, value-added, energy-saving lighting products, but also the support and information you need to make the most effective lighting decisions.

Technologically superior product innovations have set Sylvania apart. Our extensive range of products can meet almost every lighting need, and we're committed to continually improving and developing new products. For example, we have consistently led the industry in the development of energy-saving lamps without sacrificing light output, color rendering ability, or lamp life.

With our comprehensive range of training programs and education materials, like *Techniques for Better*

Lighting, we strengthen your ability to select the best lighting options for your specific needs.

As one of the first companies to join as an "ally" in the Environmental Protection Agency's "Green Lights" program, Sylvania Lighting has been spearheading preservation of the earth's precious resources through energy-saving products and recycled packaging that reduce reliance on fossil-fuel fired electricity.

With Sylvania Lighting, you'll always be assured of "Light. Made Right."

Training and Customer Support

TRAINING AND CUSTOMER SUPPORT ARE

AS CRITICAL FOR SUCCESS IN TODAY'S CHALLENGING MARKETPLACE AS

INNOVATIVE, VALUE-ADDED, ENERGY-SAVING LIGHTING PRODUCTS.

SYLVANIA LIGHTING
LEADS THE INDUSTRY
IN THE NUMBER OF
FIELD TRAINING OPPOR-
TUNITIES OFFERED.

Sylvania Lighting's comprehensive program of training, support, and educational tools is unrivaled in the industry.

From the Lightmobile™, our "Mobile Education Center," to the wide range of training programs and application materials, Sylvania Lighting is committed to helping you maximize your lighting investment.

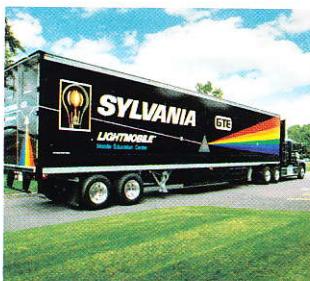

A critical aspect of Sylvania Lighting's leadership has always been its role in pioneering training

programs. The Sylvania Education and Training Centers, located in Danvers, Massachusetts and Westfield, Indiana, are state-of-the-art facilities featuring the latest in lighting demonstration and computerized audio-visual capabilities.

We were the first to bring you training where you need it most – in the field. Sylvania Lighting leads the industry in the number of field training opportunities offered.

To further assist you, we offer innovative tools such as SYLVIA®/pc, the most comprehensive lighting analysis software available, and "You Be the Judge™" demonstration equipment. Through our Westfield Customer Service Center, you gain access to the entire Sylvania Lighting network with just one toll-free phone call.

Of course, these examples are only the beginning. Whatever you need to make the best lighting decision, you can bet that Sylvania Lighting offers it.

Incandescent Lighting

SYLVANIA LIGHTING'S COMPLETE LINE OF INCAN-

DESCENT LIGHTING PRODUCTS PROVIDES THE FLEXIBILITY NECESSARY TO
MEET A BROAD SPECTRUM OF LIGHTING NEEDS.

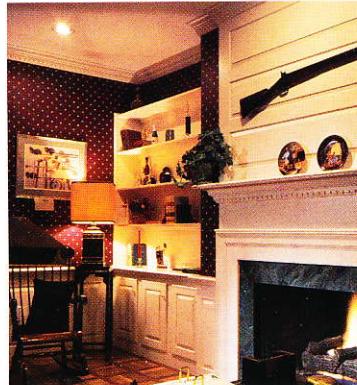

Incandescent

lighting has reached new dimensions at Sylvania Lighting.

Such innovations as the "lamp-within-a-lamp" tungsten halogen capsule technology have made Sylvania Lighting the recognized industry leader in lighting technology.

For example, our state-of-the-art Sylvania Capsylite® PAR Lamps that set new standards for light output and low energy consumption offer dramatic savings in lighting costs. The long 3500-hour rated life of our exclusive Midbreak line adds to the benefits.

Lighting can change the mood of a room, enhance visibility for

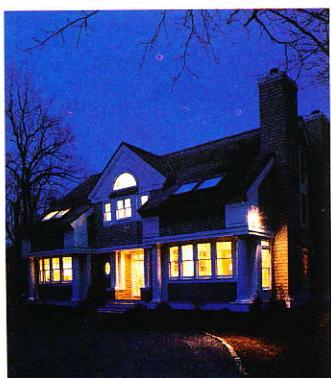

tasks, or increase safety. From three-way bulbs to spots, floods, accent, decor, and standard A-lines, Sylvania Lighting's broad array of incandescent lamps provides flexibility as well as added value. Use a variety of our incandescent products together in an area to add functionality to atmosphere.

Choose lamps that are perfect for space-saving fixtures or for achieving superior beam control without sacrificing light quality, long life, or energy savings.

Together our incandescent family of lighting products provides more of what people are looking for today.

CREATE A MOOD, ACCENT ARTWORK, HIGHLIGHT A DISPLAY, OR PROVIDE CORRECT LIGHTING FOR READING. WHATEVER THE PURPOSE, SYLVANIA LIGHTING'S INCANDESCENT LAMPS GIVE YOU THAT AND MORE.

SUCH INNOVATIONS AS THE "LAMP-WITHIN-A-LAMP" TUNGSTEN HALOGEN CAPSULE TECHNOLOGY

HAVE MADE SYLVANIA LIGHTING THE RECOGNIZED INDUSTRY LEADER IN LIGHTING TECHNOLOGY.

TECHNOLOGICAL DEVELOPMENTS HAVE EXPANDED HID USAGE TO INDOOR APPLICATIONS

THAT WERE PREVIOUSLY LIMITED TO INCANDESCENT AND TUNGSTEN HALOGEN LAMPS.

High Intensity Discharge Lighting

FROM PARKING LOTS AND OUTDOOR ILLUMINATION

TO COMMERCIAL INTERIORS, SYLVANIA LIGHTING'S HID LIGHTING OPTIONS

OFFER LOW OPERATING COSTS, HIGH LIGHT OUTPUT, AND LONG LIFE.

High efficiency and long life characterize Sylvania Lighting's HID lamps. Widely used for indoor and outdoor lighting, HID lamps' high light output makes them popular for many applications, including safety and security lighting in garages and parking lots, as well as general lighting.

And, Sylvania Lighting is creating new options for HID applications all the time. Energy saving Sylvania Metalarc® PRO-TECH™ Lamps are the first low-wattage metal halide lamps suitable for use in open-bottom lighting fixtures. With a rated life ten to thirteen times longer than incandescent lamps, Metalarc PRO-TECH™ Lamps make an excellent source for downlighting.

Improved CRI of Standard low wattage Metalarc® Lamps also expand HID usage to indoor applications that were previously limited to incandescent and tungsten halogen lamps.

Sylvania Lumalux® Lamps provide up to 145 lumens per watt, maintaining 90 percent of initial lumen output over their long 24,000 hour life. With benefits like these, Sylvania Lighting's HID lamps save lamp replacement costs while ensuring high efficiency.

Sylvania Lighting is setting the pace in HID innovations.

**SYLVANIA LIGHTING'S
NEWEST DEVELOPMENTS IN
HIGH INTENSITY DISCHARGE
(HID) LAMPS MAKE THEM
AN INCREASINGLY ATTRAC-
TIVE OPTION FOR A
DIVERSE RANGE OF HIGH
EFFICIENCY LIGHTING
APPLICATIONS, INCLUDING
THOSE THAT REQUIRE
COMPACT FIXTURES.**

Fluorescent Lighting

WITH INNOVATIONS IN SIZE, COLOR RENDERING

CAPABILITIES, AND ENERGY EFFICIENCY, SYLVANIA LIGHTING HAS CREATED FLUORESCENT LAMPS FOR A BROADER RANGE OF LIGHTING APPLICATIONS.

Sylvania Lighting has continually made significant strides in fluorescent lighting technology and has long been known as the choice for energy savings.

With the introduction of Sylvania Octron® Lamps, we brought energy savings to an unprecedented level. The Octron system is recognized as one of the most efficient fluorescent lighting systems on the market today.

By developing the dual-coat phosphor technology, Sylvania Lighting paved the way for combining substantial energy savings with high light output and high color rendering ability, all in a single fluorescent lamp.

Sylvania Lighting's introduction of the FE18 electronic compact

fluorescent lamp solidified its role as a premier fluorescent lighting manufacturer. The compact fluorescent is revolutionizing commercial and home lighting options by providing the energy savings and long life of traditional fluorescent lamps combined with all the benefits of incandescent lamps – bright, glare-free, soft white light. And no adapter is needed – the lamp fits into standard household sockets.

From Octron Curvalume® Lamps to Designer® Series Fluorescents, Sylvania Lighting offers a full spectrum of value-added, energy-saving fluorescent lighting options for any combination of lighting application and need.

WHETHER YOU NEED
COMPACT LAMPS FOR
ACCENT OR DOWN-
LIGHTING OR ENERGY
SAVINGS FOR GENERAL
LIGHTING, SYLVANIA
LIGHTING'S FLUORESCENT
LAMPS OFFER YOU
EXCELLENT COLOR
RENDERING CHOICES.

SYLVANIA LIGHTING'S OCTRON SYSTEM IS RECOGNIZED AS ONE OF THE
MOST EFFICIENT FLUORESCENT LIGHTING SYSTEMS ON THE MARKET TODAY.

Lighting Considerations

WHETHER YOU ARE SELECTING A NEW LIGHTING SYSTEM, RENOVATING, OR CHANGING LAMPS, UNDERSTANDING LIGHT AND COLOR RELATIONSHIPS WILL HELP YOU MAKE THE BEST CHOICE.

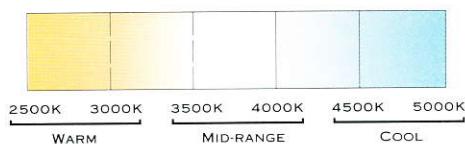

Many factors affect the color appearance of an object including the finishes used on walls, floors, and furnishings; the intensity level of the lighting; the presence of daylight in the room, and room decor. All factors should be considered in selecting the light source. If colors such as red and brown predominate, a "warm" light source (color temperature below 3200 Kelvin) would be the best choice. Conversely, if blues and violets predominate, "cool" lamps (color temperature above 4000 Kelvin) should be used. For areas with mixed cool and warm colors, or where neutral colors such as gray predominate, an intermediate color temperature source (3400 to 3600 Kelvin) should be considered.

Color Temperature

The color appearance of a lamp is known as "color temperature." Color temperature describes how the lamp itself appears when illuminated. It is the first consideration in lamp color selection. Color temperature is measured in Kelvins ranging from 9000K (which appears blue) down to 1500K (which appears orange-red). Light sources lie somewhere between the two, with those of higher color temperature – 4000K or more – being "cool," and those of lower

color temperature – 3200K or less – being "warm." Certain fluorescent lamps are intermediate types, lying somewhere between "cool" and "warm."

Suggested Color Temperature Range

4100K COOL COLOR TEMPERATURE

3000K WARM COLOR TEMPERATURE

LOW COLOR RENDERING INDEX–COLORS APPEAR DISTORTED

HIGH COLOR RENDERING INDEX – COLORS APPEAR NATURAL

All lamps manufactured in the U.S.A. by Sylvania conform to relevant ANSI, IES and Federal specifications.

Ordering Information

1. Lamps should be ordered by abbreviations and Sylvania item number, plus the specific voltages desired. Ordering abbreviations which are complete without voltage include series lamps listed by lumens and amperes, Blacklight, Fluorescent, H.I.D., and Germicidal Lamps.

2. Technical Data in this Schedule (life, lumens, voltage, etc.) are subject to manufacturer's tolerances. Current performance characteristics are published in Engineering Bulletins which are available from your Sylvania Sales Representative.

3. Lamps Listed 115-125 volts (design voltage 120), 120-130 volts (design voltage 125), 125-130 volts (design voltage 130) and 230-250 volts (design voltage 240) are intended for use on circuits normally varying within these voltage limits.

4. Proper Auxiliary Equipment must be used with Sylvania Blacklight, Fluorescent, H.I.D. and Germicidal Lamps to produce rated electrical values. For these types, the wattages are approximate: for total, add auxiliary watts. To obtain Blacklight from Mercury Lamps, an auxiliary glass filter is required. Not available from Sylvania.

SYLVIA® Lighting Audits

Sylvania Information Analyses consist of computer programs that can help you get the most out of your lighting system. All are available without charge to lamp users. SYLVIA Lighting Audits can help you analyze existing systems or systems you are planning, and recommend ways you can improve lighting efficiency and reduce energy costs.

Four major programs are available:

- **Economic Analysis** — This program analyzes and compares up to three lighting systems at the same time. Labor, fixtures, wiring distribution, lamps and energy costs are all taken into consideration in determining the most economical system for the application.
- **Relamping Analysis** — Compares the costs and effects of spot relamping against group relamping to determine the most effective lighting maintenance plan.

• **RENA** — Sylvania's Relight Energy Analysis program demonstrates in dollars and cents the advantages of replacing ordinary standard lamps with energy-saving lamps. RENA also shows the impact that light sources have on your heating and air conditioning costs.

• **Life Cycle Cost (LCC)** — This Sylvania program evaluates labor, power and lamp costs in terms of the amount of light received. The Life Cycle Cost program analyzes lamp life and lumen output, and provides the number of lumen-hours received from each system analyzed.

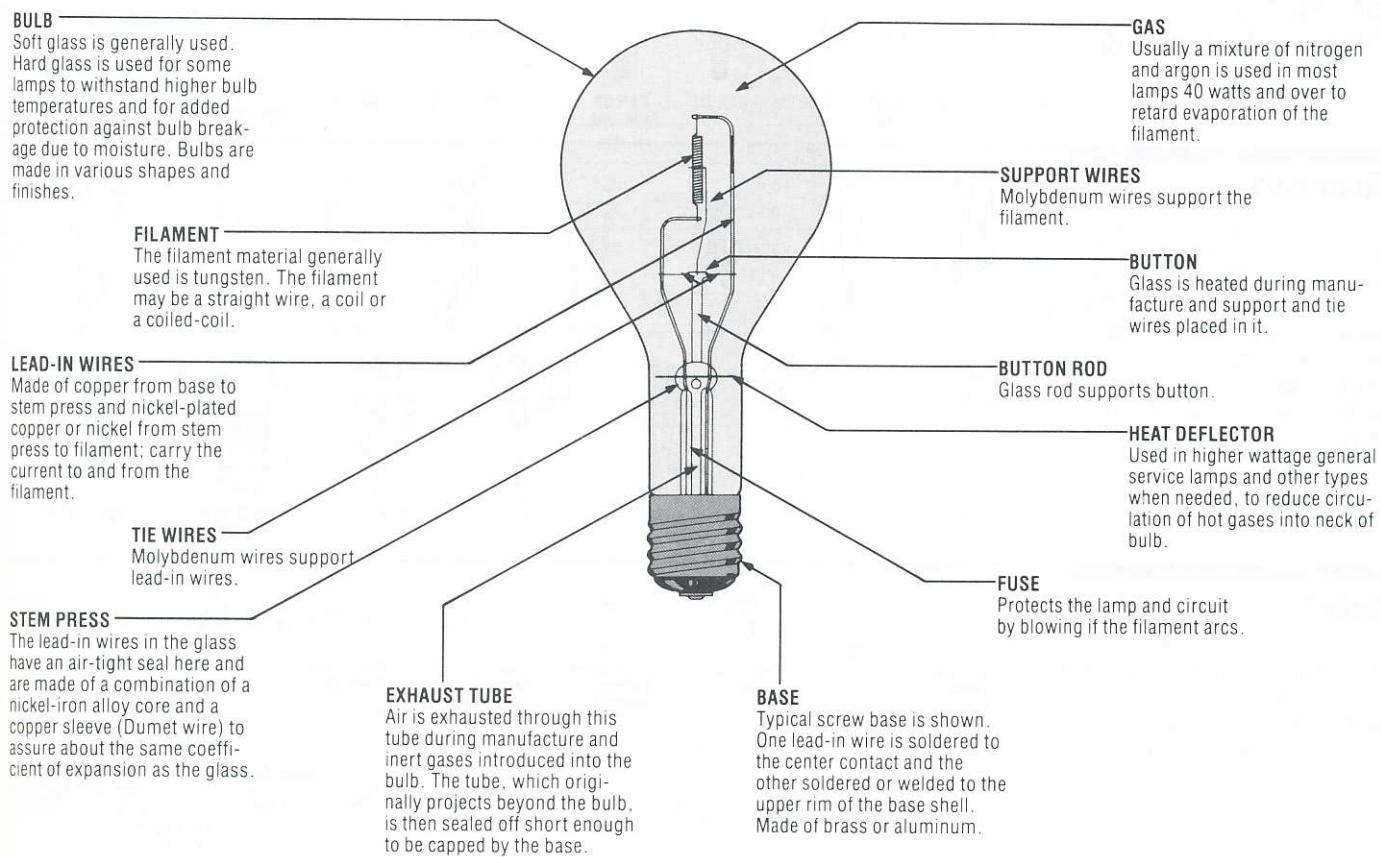

• **ROI Analysis** — Your lighting represents an important investment. This SYLVIA Program will tell you the annual Return On Investment (as a percentage) that Sylvania energy-saving lamps will give you based on their additional cost.

For more information about SYLVIA Lighting Audits and how they can help you get the most for your lighting dollar, call your Sylvania Lamp Distributor or your nearest Sylvania Sales Office.

Notes

Sylvania: The Leader In Energy-Saving Incandescent Lamps

The incandescent lamp consists of a wire filament on a suitable mount enclosed on a glass bulb containing a gas or a vacuum. When the lamp is connected to an electrical circuit, the electric current passing through the filament wire must overcome its resistance, and the power consumed heats the filament to incandescence (causes it to glow)

How to Read Ordering Guide

	Ordering Abbreviation			Volts	Indicates aluminum base	Filament Code	Approx. Lumens	(M.O.L.) Max. Overall Length
25	A-15	Med.	10125	25A15	115-125 120	•Inside Frosted, Refrig.	B, C-9	1100 250 2 ³ / ₈ 3 ¹ / ₂
	A-17	Med.	10417	25A17/RS	75 120	I.F. Train, Rough Service	B, C-9	1000 228 2 ³ / ₈ 3 ¹ / ₂
Watts	A-19	Med.	10443	25A 25A17/RS	6 120	Inside Frosted	C, C-6	1000 357 2 ¹ / ₂ 3 ¹⁵ / ₁₆
Bulb					Package Quantity	Footnotes	Average Rated Hours Life	(L.C.L.) Light Center Length
					Description		Class C - denotes gas filled bulb.	
							Class B - denotes vacuum lamp.	

One NAED code # for each lamp

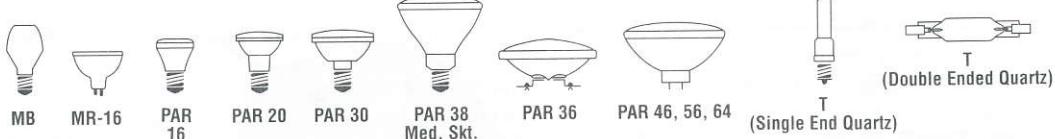

25 — Lamp Nominal Wattage
A — A shape
17 — 17/8 = 2 1/8" Diameter
RS — Rough Service

Incandescent Lamps

A bulb designation consists of a letter(s) to indicate the shape and a figure(s) to indicate the approximate major diameter in eights of an inch. Bulbs are measured through their greatest diameter, in eights of an inch. Thus, a F-15 bulb is a flame shape, 15/8 of an inch or 1-7/8 inches in diameter.

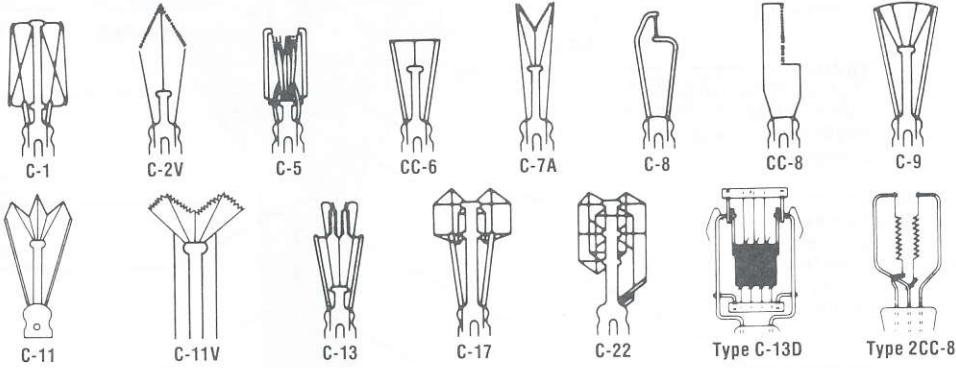

Incandescent Tungsten Halogen & Quartz Lamps

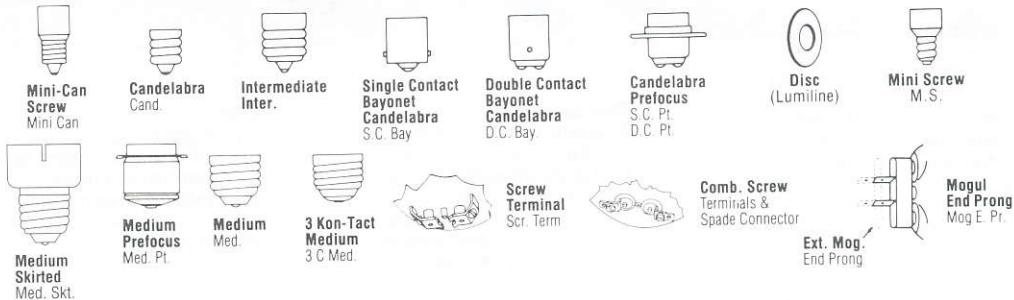

Filaments

A FILAMENT designation consists of a prefix letter to indicate whether the wire is straight or coiled, and a number to indicate the arrangement of the filament on the supports. Prefix letters include: S (straight) — wire is straight or slightly corrugated; C (coiled) — wire is wound into a helical coil or it may be deeply fluted; CC (coiled coil) — wire is wound into a helical coil and this coiled wire again wound into a helical coil.

Bases

Typical screw base is shown. One lead-in wire is soldered to the center contact and the other soldered or welded to the upper rim of the base shell. Made of brass or aluminum.

Bulb size - Max. Diameter (Divide by 8)

$$A-21 \cdot \frac{21}{8} = 2\frac{5}{8} \text{ Dia.}$$

$$G-40 \cdot \frac{40}{8} = 5 \text{ Dia.}$$

$$T-12 \cdot \frac{12}{8} = 1\frac{1}{8} \text{ Dia.}$$

$$PS-30 \cdot \frac{30}{8} = 3\frac{3}{4} \text{ Dia.}$$

Finishes

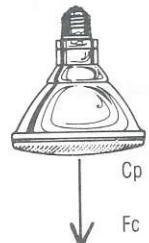

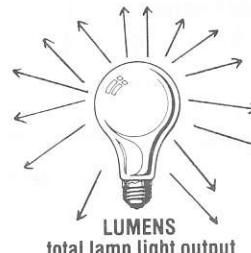

- W - white
- Y - yellow
- B - blue
- R - red
- G - green
- A - amber
- IC - iridescent clear
- FL - flood
- SP - spot
- IF - inside frost
- BL - blister
- AIC - amber iridescent clear
- SPK - soft pink

Lamps Listed 115-125 volts (design voltage 120), 120-130 volts (design voltage 125), 125-130 volts (design voltage 130) and 230-250 volts (design voltage 240) are intended for use on circuits normally varying within these voltage limits.

Light Center Length (L.C.L.) is the average measurement for which the lamp is designed, subject to manufacturing tolerances. The light center length is the distance from the center of light source to the following point for the base used: Screw bases...bottom base contact; Bayonet

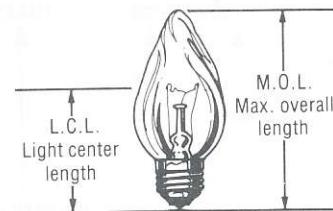

candelabra and medium bayonet...top of base pins; Medium and Mogul Prefocus...top of base pin; S.C. or D.C. Prefocus – Plane of locating Bosses of Prefocusing Collar.

Class B denotes vacuum lamp. **C** denotes gas filled lamp.

$$C_p = \text{Ray of Light in one direction}$$

$$F_c = \frac{\text{Max Beam } C_p}{D^2}$$

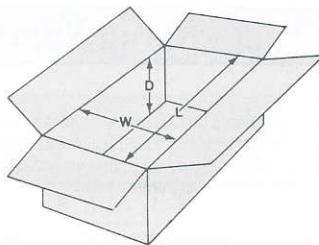

Weights & Measures of Popular Incandescent Types

The packaging industry describes box dimensions as follows: The length is the larger of the two dimensions of the open face (flap opening); the width is the smaller. The depth is always the distance measured perpendicular to the length and width between the innermost surfaces of the box.

The diagram here will help you visualize these descriptions.

Generally, packages of lamps of a similar type and wattage will have approximately the same weights and measurements. Occasionally, packing data will be changed without notice.

SYL. ITEM NO.	DESCRIPTION	VOLTS	PACKAGE QTY.	PACK	WEIGHT (POUNDS)	CUBE (FEET)	DIMENSIONS (L × W × D)

Sylvania: The Leader In Energy-Saving HID Lamps

UNDERSTANDING HIGH INTENSITY DISCHARGE

HID

A brief description of the catalog format will assist the reader in understanding the information presented in this section.

All product families are listed in ascending wattage, followed by alphabetical bulb designation to simplify lamp identification.

Performance ratings are based on tests conducted under controlled conditions on AC circuits with auxiliary equipment meeting current published specifications.

Lamp performance under typical service conditions will vary from rated values. Ratings and specifications are subject to change without notice.

WATTS

Watts shown are lamp watts only. For total system watts, add nominal ballast watts for the specific ballast being used.

BULB

Descriptions of bulb shapes are shown on page 65. They consist of letters to indicate bulb shape, followed by numbers which indicate maximum bulb diameter in $\frac{1}{8}$ inch increments. For example, a BT-37 bulb is a blown shape with a tubular top, $4\frac{1}{8}$ inches in diameter. Although Sylvania HID bulbs are made of glass designed to resist thermal shock in normal applications, it must be shielded from direct contact with liquids during operation to avoid bulb breakage.

BASE

Sylvania HID lamp bases are made of corrosion-resistant brass or nickel plated brass with special lubricant on the brass bases to provide easy removal at end of lamp life.

Medium — Medium (MED) bases are used on lamps in ED-17 bulbs and are limited to 175 Watts maximum.

Medium Skirted — A medium brass base with skirt (Med. Skt.) which is mechanically connected to a PAR-38 bulb.

Mogul — All mogul (MOG) bases are embossed with letters and numbers representing months and years. The date of installation can be recorded by marking the letter of the current month and the number which coincides with the last digit of the current year.

POM — Position Oriented Mogul (POM) bases are used on lamps designed to operate only in the horizontal position and require a special (POM) socket.

Recessed Single Contact (RSC) — Sylvania double end HID lamps have RSC bases with silver plated contacts to provide maximum electrical contact. See page 65 for all base diagrams.

ITEM NUMBER

Item number is a five digit number used to identify a specific Sylvania lamp and should be used when ordering.

ORDERING ABBREVIATION

Provides a shorthand description of the lamp, using a unique code which can be used when ordering a lamp if you do not know the item number.

ANSI SPECIFICATION NUMBER

This is a unique code which describes the physical and electrical characteristics of the product. The code is developed and assigned by the American National Standards Institute (ANSI).

PACKAGE QUANTITY

This identifies the number of lamps contained in a standard shipping carton. A premium charge may apply to orders for less than standard package quantities.

AVERAGE LIFE (HOURS)

The average life of a lamp is based on vertical operation (unless otherwise noted) of representative lamps operated under controlled conditions of at least 10 hours per start. Average life is defined as the total operating hours at which 50% (MEDIAN) of any group of lamps is still burning.

Variations in operating conditions such as voltage, bulb and base temperatures can also affect lamp life.

Operating cycles shorter than 10 hours per start will reduce lamp life as follows:

5 HRS/START — APPROX. 75% OF RATING
2 $\frac{1}{2}$ HRS/START — APPROX. 55% OF RATING
1 $\frac{1}{4}$ HRS/START — APPROX. 40% OF RATING

LUMENS

Initial ratings are based on photometry under controlled conditions of at least 10 hours per start in the prescribed position at rated lamp watts after 100 operating hours. Lamp performance under typical service conditions will vary from rated values.

Universal burning Metalarc lamps operated in off-vertical positions will result in reduced lumen output.

Mean lumens of Metalarc lamps are measured at 40% of rated life, High Pressure Sodium and Mercury lamps at 50% of rated life. All measurements based on ballast crest factors of 1.8 or less. Higher crest factors reduce values.

LIGHT CENTER LENGTH (LCL)

The light center length of HID lamps is usually measured in inches from the center of the arc tube to the bottom of the lamp base.

MAXIMUM OVERALL LENGTH (MOL)

The maximum overall length of single end lamps is the maximum distance, measured in inches, from the top of the bulb to the bottom of the base.

For double ended lamps, it is the maximum distance from end-to-end.

ARC LENGTH

Arc length is the dimension in inches of the arc discharge measured from one electrode tip to the other. This is useful for optical design of reflectors and affects fixture efficiency.

KEY TO DATE OF MANUFACTURE

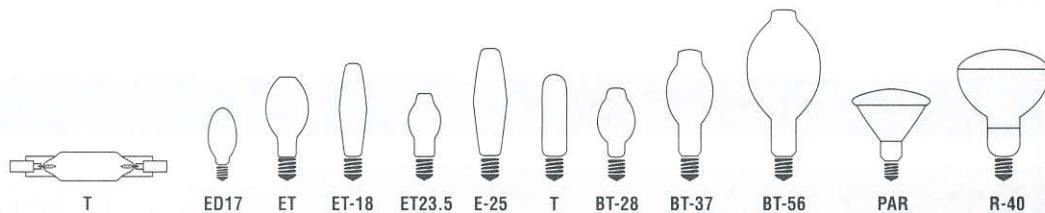

Most Sylvania HID lamps have the date of manufacture embossed on the base. The numbers following "SR" or "ST" represent a 3 digit, 10 year (120 month) date code beginning January 1991 as 001 and ending with December 2000 as 120. On medium based lamps the date of manufacture is stamped on the glass envelope using the same code.

Bulbs

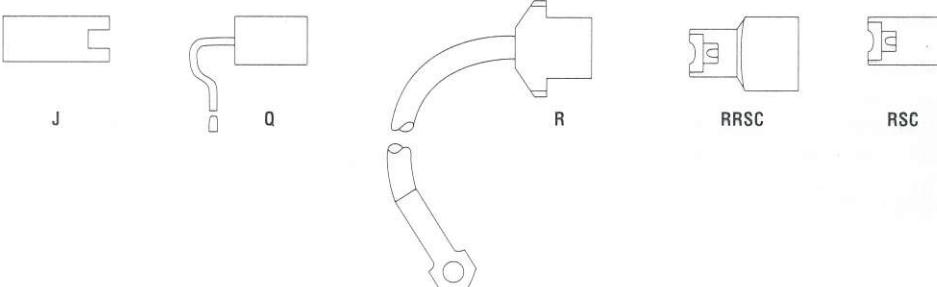

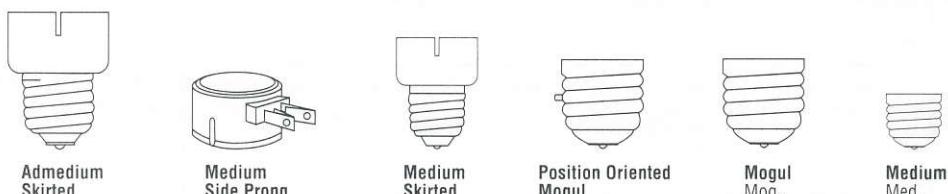

A Bulb designation consists of a letter(s) to indicate the shape and a figure(s) to indicate the approximate maximum diameter in eighths of an inch. Thus, an ED17 is an Ellipsoidal Shape, $\frac{17}{8}$ of an inch or $2\frac{1}{8}$ inches in diameter.

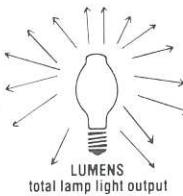

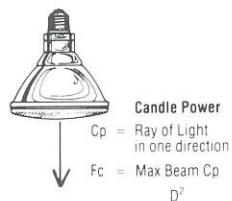

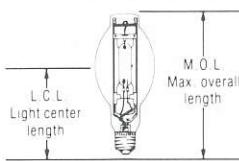

Bases

Lamps with screw bases have one lead-in wire soldered to the center contact and the other soldered or welded to the upper rim of the base shell.

Bases with ceramic bodies have internal leads welded to either silver plated contacts or external lead wires.

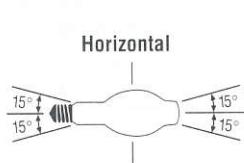

Light Center Length (L.C.L.) The light center length is the distance from the center of light source to the bottom of the base used subject to manufacturing tolerances.

Operating Positions

The designated operating positions assure maximum lamp performance. Where it is not specified, the lamp is suitable for operation in any position.

Weights & Measures of Popular HID Lamps

The packaging industry describes box dimensions as follows: The length is the larger of the two dimensions of the open face (flap opening); the width is the smaller. The depth is always the distance measured perpendicular to the length and width between the innermost surfaces of the box.

The diagram here will help you visualize these descriptions.

Generally, packages of lamps of a similar type and wattage will have approximately the same weights and measurements. Occasionally, packing data will be changed without notice.

HID Lamp Colors Correlated Color Temperatures and Color Rendering Index

Color Temperature

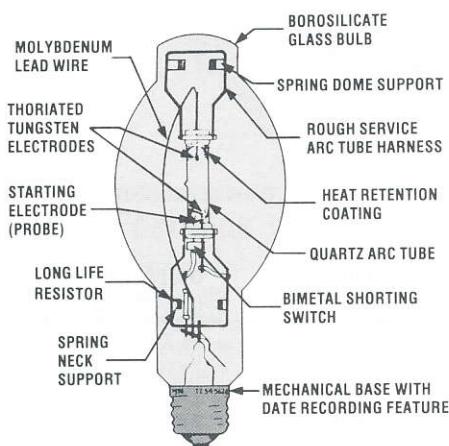

The correlated color temperature of a light source, expressed in Kelvins (K), is a means of describing the appearance or chromaticity of the source. It describes the apparent whiteness of the lamp. The correlated color temperature of the light source contributes to the visual appearance of the lighted space.

Color Rendering Index

Color Rendering Index (CRI) is an international scale (numbering system) from 0-100 which indicates the relative color rendering quality of a light source when compared to a standard reference light source of the same chromaticity (color temperature). It expresses the degree to which colors will appear "familiar" or "natural" under the light source selected. In general, the higher the CRI number, the better the color rendering properties of the light source being measured. The color rendering index of any two like sources should only be compared if those sources have the same correlated color temperature.

GUIDE TO METAL HALIDE LAMPS

METALARC® PRO-TECH™ — These are specially designed lamps of 50, 70, 100, 400, 1000 watts for use in OPEN FIXTURES where increased fixture efficiency and lower maintenance costs are important. May also be used in older enclosed fixtures which do not comply with UL Standard 1572 revised 12/88 and additional safety is desired. All wattages are available in clear and phosphor coated bulbs.

METALARC® SAFELINE® — Lamps of 400, 1000 watts designed to self extinguish when the outer bulb is broken. Recommended for use in OPEN FIXTURES installed in sports facilities and other places of public assembly where the lamps may be subject to breakage by external objects.

BRITE-LINE™ — Lamps of 70, 100, 150, 1000, 1500, 2000W designed for compact fixtures which provide excellent optical control and high efficiency. The higher wattage lamps are particularly well suited for sports lighting and outdoor floodlighting applications. Lower wattage lamps are designed for applications requiring good optical control and warm color. All lamps must be operated in ENCLOSED FIXTURES with an ultraviolet (UV) filter glass lens to prevent serious skin burns and eye inflammation resulting from shortwave ultraviolet radiation.

STANDARD AND SUPER METALARC® LAMPS

WARNING

This product conforms to Federal Standard 21 CFR 1040.30

This lamp can cause serious skin burn and eye inflammation from shortwave ultra-violet radiation if outer envelope (glass bulb) of the lamp is broken or punctured. Do not use where people will remain for more than a few minutes unless adequate shielding or other safety precautions are used. Lamps that will automatically extinguish when the outer envelope is broken or punctured are commercially available from GTE Products Corporation.

Metal Halide arc tubes operate under high pressure (up to 50 p.s.i.) and at very high temperatures and can unexpectedly rupture due to internal causes or external factors such as a ballast failure or misapplication. An arc tube rupture can burst and shatter the outer glass bulb resulting in the discharge of glass fragments and extremely hot quartz particles (as high as 1832°F – 1000°C). In the event of such rupture, there is a risk of personal injury, property damage, burns and fire.

All Standard and Super Metalarc **except 400 and 1000 watt lamps**, operating within 15° of vertical, must be operated in **enclosed fixtures** which comply with UL Standard 1572 (revised December 26, 1988). Such fixtures should withstand an arc tube rupture. Refer to the fixture manufacturer data for compliance with UL 1572.

To reduce the risk of personal injury and property damage the user must follow the instructions below.

Operating and Installation Instructions

1. Operate lamps only with compatible auxiliary equipment (ballast, starter, capacitor and socket) as indicated by the ANSI designation on the lamp.
 2. Do not remove the lamp when power is **on**. If outer glass bulb is broken, shut off power immediately and remove the lamp after it has cooled.
 3. **Turn lamp off for a minimum of fifteen minutes at least once a week.**
 4. **Replace lamp at or before end of published rated life.**
 5. Do not expose operating lamp to moisture.
 6. Replace lamp if outer glass bulb has been scratched, cracked or damaged in any way.
 7. Electrically insulate any metal support in contact with the outer glass bulb to avoid glass decomposition.
 8. To ensure electrical contact, screw lamp firmly but not forcibly in the socket. Excessive force may cause the outer envelope to break.
- Metalarc lamps must be operated in their designated burning position to achieve design performance ratings for lumens, life and color temperature.

METALARC® PRO-TECH™

WARNING

This product conforms to Federal Standard 21 CFR 1040.30

This lamp can cause serious skin burn and eye inflammation from shortwave ultra-violet radiation if outer envelope (glass bulb) of the lamp is broken or punctured. Do not use where people will remain for more than a few minutes unless adequate shielding or other safety precautions are used. Lamps that will automatically extinguish when the outer envelope is broken or punctured are commercially available from GTE Products Corporation.

All Metalarc Pro-Tech lamps are designed for use in open fixtures and must be operated in the designated burning position as shown on the outer glass bulb, i.e., BU (Base Up).

In applications requiring an additional measure of safety, an enclosure material that complies with UL Standard 1572 (revised December 1988) can be used.

All instructions listed for standard and Super Metalarc lamps on page 68 also apply to the Metalarc Pro-Tech lamps.

METALARC® SAFELINE®

WARNING

This product conforms to Federal Standard 21 CFR 1040.30

All Metalarc Safeline lamps are designed for use in open fixtures and must be operated in the designated burning position as shown on the outer glass bulb, i.e., BU (Base Up).

This lamp should self-extinguish within 15 minutes after the outer envelope is broken or punctured. If such damage occurs, turn off and remove lamp to avoid possible injury from hazardous shortwave ultra-violet radiation.

All instructions for standard and Super Metalarc lamps listed on page 68 also apply to the Safeline lamps.

BRITE-LINE™ LAMPS

WARNING

This lamp must be operated only in a suitably enclosed fixture designed to reduce the risk of personal injury and property damage resulting from an arc tube rupture. A suitably enclosed fixture uses lens/diffuser material able to contain fragments of hot quartz (up to 1832°F). Enclosed fixtures which comply with UL Standard 1572 revised December 26, 1988 should withstand an arc tube rupture.

Exposure to shortwave ultraviolet radiation from this lamp can cause serious skin burn and eye inflammation. Use only in equipment provided with a lens cover of high temperature aluminosilicate glass (such as Corning Corlite®) or equivalent which filter out harmful shortwave ultraviolet radiation.

We strongly recommend the fixture be provided with a power interlock device to automatically turn off lamp if fixture assembly is opened.

If the fixture lens is broken, turn power off immediately. People should not remain in the area for more than a few minutes without adequate shielding or other safety precautions while lamp is operating with a broken lens.

Operating and Installation Instructions

1. Operate lamps only with compatible auxiliary equipment fixture (ballast, capacitor, ignitor).
2. Turn lamp off once per week for at least 15 minutes.
3. Lamp should be in contact only with sockets and should be inserted without undue pressure.
4. To avoid electrical shock, do not remove or install lamp when power is on.
5. Base temperature of this lamp must not exceed 350°C.
6. All seal gaskets and wire insulation must be shielded from ultraviolet radiation produced by the lamp.
7. Bulb wall temperature of this lamp must be maintained between 600°C and 700°C for satisfactory performance.
8. Fixture wiring must have minimum voltage rating of 1500V RMS and a temperature rating of 250°C for lamps 1000 watts or greater.
9. Luminaire reflector should be a minimum of 3/4 of an inch from quartz tube to prevent short lamp life due to photoelectric effects.
10. Lamp should be operated within 4 degrees of the horizontal position with exhaust tip up to insure maximum operating efficiency.
11. Replace lamp at or before the end of rated life as specified in the Sylvania Product Bulletin available at no cost.

Caution

Do not remove lamp from package until ready for use. Handle the lamp only with clean, cotton gloves. If the lamp is handled, fingerprints, grease or oils should be removed from the quartz by washing the lamp in distilled water or isopropyl alcohol. This will remove materials which cause whitish spotting (devitrification) and premature lamp failure. Dry the lamp carefully with cotton or a clean cloth.

GUIDE TO HIGH PRESSURE SODIUM LAMPS

There are currently three families of Sylvania High Pressure Sodium lamps: Lumalux®, Lumalux® Standby and Unalux®. They are the most efficient HID sources available. These lamps are used for general lighting applications where high efficiency and long life are desired and color rendering is not critical. Typical applications include streetlighting, industrial hi-bay, parking lot lighting, and building floodlighting.

LUMALUX®

Available in a broad range of mogul base general lighting lamps from 35-1000 watts for universal operation. Lamps from 35 to 150 watts are also available in medium base. All lamps are available in clear and coated bulbs.

LUMALUX® STANDBY

These lamps are designed with two arc tubes to provide instant restrike capability in the event of a momentary power interruption without total loss of light.

UNALUX®

These retrofit lamps are designed to operate on all mercury reactor ballasts when increased light and reduced energy is desired.

LUMALUX® AND LUMALUX STANDBY LAMPS

WARNING

1. These lamps must be operated with a fixture and ballast which has an ANSI designation identical to the ANSI designation on the lamp etch on the outer glass bulb or the lamp may shatter resulting in the discharge of hot glass particles. SHOULD THIS OCCUR, THERE IS A RISK OF PERSONAL INJURY AND PROPERTY DAMAGE FROM HOT PARTICLES OR SHATTERED GLASS, BURNS AND FIRE.
2. Do not remove or insert lamps when power is on. If outer glass bulb is broken, shut off power immediately and remove lamp after it has cooled.
3. Do not expose operating lamp to moisture.
4. Replace the lamp if outer glass bulb has been scratched, cracked or damaged in any way.
5. Electrically insulate any metal support in contact with the outer glass bulb to avoid glass decomposition.

Operating and Installation Instructions

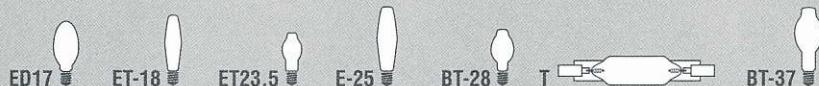

1. To avoid burn injury, allow lamp to cool before removing from the fixture.
2. To ensure electrical contact, screw lamp firmly but not forcibly into the socket. Excessive force may cause the outer glass bulb to break.
3. Lamps may be operated in any burning position.
4. To minimize cycling, replace lamp at or before end of published rated life.
5. Lumalux lamps require a specially designed mogul base socket electrically rated to withstand 4000 volt pulses except LU750 and LU1000 which require sockets to withstand 5000 volt pulses.

UNALUX® LAMPS

WARNING

Unalux lamps will operate satisfactorily on conventional Mercury ballast circuits meeting current ANSI specifications. Ballast must be high leakage reactance lag type auto-transformer; or a 240 or 277 volt reactor for the 150W, 215W, 360W lamps and a 480 volt reactor for the 880W lamp. Lamps should not be used in luminaries which cause excessive increase in arc tube operating voltage. **Do not use these lamps with constant wattage or constant wattage auto-transformer ballasts, conventional high pressure sodium ballasts or equipment not meeting conditions shown in the following table.**

Mercury Lamp Wattage	ANSI Ballast	Unalux Type	Approximate Unalux Lamp Wattage
175	(H30)	ULX-150	150
250	(H37)	ULX-215	215
400	(H33)	ULX-360	360
1000	(H36)	ULX-880	880

GUIDE TO MERCURY LAMPS

The two families of mercury lamps are designed primarily for use in general lighting applications where good efficiency, long life are desired and color rendering requirements are moderate. Applications include streetlighting, industrial hi-bay, parking lot lighting, and general floodlighting.

STANDARD MERCURY

Available in a wide range of lamps from 50-1000 watts in clear and two types of phosphor coatings to improve color rendering capabilities.

PAR lamps offer floodlighting and UV for special lighting applications.

MERCURY SAFELINE®

Lamps of 100-1000 watts designed to self extinguish when the outer bulb is broken. Recommended for use in OPEN FIXTURES installed in sports facilities and other places of public assembly where lamps may be subject to breakage by external objects.

STANDARD MERCURY

WARNING

Mercury lamps operate under high pressure (up to 50 p.s.i.) and at very high temperatures and can unexpectedly rupture due to internal causes or external factors such as ballast failure or misapplication. An arc tube rupture can burst and shatter the outer glass bulb resulting in the discharge of glass fragments and extremely hot quartz particles (as high as 1832°F-1000°C). In the event of such rupture, **there is a risk of personal injury, property damage, burns and fire.**

Operating and Installation Instructions

1. Operate lamps only with compatible auxiliary equipment (ballast, capacitor and socket) as indicated by the ANSI designation on the lamp.
2. Do not remove the lamp when power is **on**. If outer glass bulb is broken, shut off power immediately and remove lamp after it has been cooled.
3. Do not expose operating lamp to moisture.
4. Replace the lamp if outer glass bulb has been scratched, cracked or damaged in any way.
5. Electrically insulate any metal in contact with the outer glass bulb to avoid glass decomposition.
6. To ensure electrical contact, screw lamp firmly but not forcibly into the socket. Excessive force may cause the outer envelope to break.

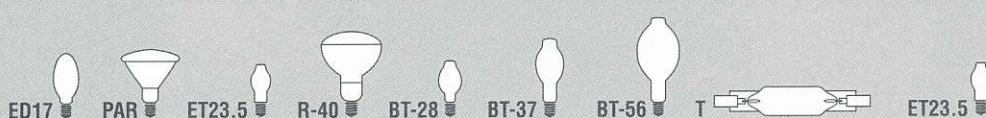

MERCURY SAFELINE®

WARNING

This product conforms to Federal Standard 21 CFR 1040.30

This lamp should self extinguish within 15 minutes after the outer envelope is broken or punctured. If such damage occurs, **turn off and remove lamp to avoid possible injury from hazardous shortwave ultra-violet radiation.**

All instructions for standard mercury lamps listed above also apply to the Safeline lamps.

GUIDE TO REPROGRAPHIC/PHOTOCHEMICAL LAMPS

Lamps range from 250-3000 watts and are designed for applications other than general lighting. These applications include; plate making, photo resist exposure, imaging and others requiring the use of ultra-violet energy.

JACKETED REPROGRAPHIC/ PHOTOCHEMICAL LAMPS

WARNING

This lamp must be operated only in a suitably enclosed fixture designed to reduce the risk of personal injury and property damage resulting from an arc tube rupture. A suitable enclosed fixture uses lens/diffuser material able to contain fragments of hot quartz (up to 1832°F). Enclosed fixtures which comply with UL Standard 1572 revised December 26, 1988 should withstand an arc tube rupture.

This lamp can cause serious skin burn and eye inflammation from short wave ultraviolet radiation if outer envelope (glass bulb) of the lamp is broken or punctured. If the lamp is broken, turn power off immediately. People should not remain in the area without adequate shielding or other safety precautions while the broken lamp is operating.

Operating and Installation Instructions

1. Operate lamps only with compatible auxiliary equipment (ballast, capacitor, ignitor).
2. Turn lamp **off** once per week for at least 15 minutes.
3. Electrically insulate any metal support in contact with the outer envelope to avoid glass decomposition.
4. To avoid electrical shock, do not remove or install lamp when power is **on**.
5. If outer glass bulb is broken, shut off power immediately and remove lamp after it has cooled to prevent exposure to short wave ultraviolet energy.
6. Protect lamp from contact with liquids and moisture.
7. Replace lamp if outer bulb has been scratched, cracked or damaged in any way.
8. To ensure electrical contact, screw lamp firmly, but not forcibly, into socket. Excessive force may cause outer glass bulb to break.
9. Lamp should be operated within 15 degrees of the horizontal position.

UNJACKETED REPROGRAPHIC/PHOTOCHEMICAL LAMPS

WARNING

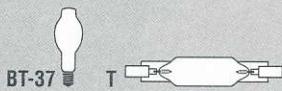

Exposure to shortwave ultraviolet radiation from this lamp can cause serious skin burn and eye inflammation. This lamp must be operated in an enclosed fixture specifically designed to reduce the risk of personal injury and property damage resulting from an arc tube rupture and from ultraviolet radiation.

Operating and Installation Instructions

1. Operate lamps only with compatible auxiliary equipment (ballast, capacitor, ignitor).
2. Turn lamp **off** once per week for at least 15 minutes.
3. Lamp should be in contact only with sockets and should be inserted without undue pressure.
4. To avoid electrical shock, do not remove or install lamp when power is **on**.
5. Base temperature of this lamp must not exceed 350°C.
6. All seal gaskets and wire insulation must be shielded from ultraviolet radiation produced by the lamp.
7. Bulb wall temperature of this lamp must be maintained between 600°C and 700°C for satisfactory performance. If cooling is required to maintain proper temperature range, we recommend use of air interlock vane switches to protect against motor failure.
8. Fixture wiring must have minimum voltage rating of 1500V RMS and a temperature rating of 250°C for lamps 1000 watts or greater.
9. Lamp should be operated within 15 degrees of the horizontal position with exhaust tip up to insure maximum operating efficiency.

Caution

Do not remove lamp from package until ready for use. Handle the lamp only with clean, cotton gloves. If the lamp is handled, fingerprints, grease or oils should be removed from the quartz by washing the lamp in distilled water or isopropyl alcohol. This will remove materials which cause whitish spotting (devitrification) and premature lamp failure. Dry the lamp carefully with cotton or a clean cloth.

Sylvania: The Leader In Energy-Saving Fluorescent Lamps

The fluorescent lamp is an electric discharge device which utilizes a low pressure mercury vapor arc to generate ultra-violet (plus a little visible) energy. The ultra-violet energy is absorbed by a phosphor coat on the inside of the glass tube and converted by the phosphor to visible wavelengths; the wavelengths of the light generated are determined by the composi-

tion of the phosphor. In addition to the small amount of mercury vapor, the fluorescent tube contains an atmosphere of an inert gas, usually argon, krypton, neon, or a mixture of two or more of these gases. The pressure of the gases contained in the lamp is very low, usually from 2 to 3 torr. Atmospheric pressure is 760 torr.

Weights & Measures of Popular Fluorescent Types

The packaging industry describes box dimensions as follows: The length is the larger of the two dimensions of the open face (flap opening); the width is the smaller. The depth is always the distance measured perpendicular to the length and width between the innermost surfaces of the box.

The diagram here will help you visualize these descriptions.

Generally, packages of lamps of a similar type and wattage will have approximately the same weights and measurements. Occasionally, packing data will be changed without notice.

(1) Color Temperature

The correlated color temperature of a light source is expressed in Kelvins (K) and is a means of describing the appearance or chromaticity of the source itself. It describes the apparent whiteness of the lamp.

Sources having a low correlated color temperature (2700K to 3400K) are said to be "warm" in color such as Warm White, Warm White Deluxe, and Designer 3000K (D30) and Designer "800" 3000K (D830). (Most incandescent lamps have a color temperature between 2700K and 3000K.) Fluorescent sources having higher correlated color temperature (4100K to 6300K) such as Cool White, Cool White Deluxe, Daylight Designer "800" 4100K (D841), or Designer 4100K (D41) are said to be "cool" in color. The Designer Series and Octron Lamps having a correlated color temperature of 3500K are considered "mid-range" and provide excellent color rendition while not being either "warm" or "cool." The correlated color temperature of the light source contributes greatly to the overall visual appearance of the lighted space.

(2) Color Rendering Index

Color Rendering Index (CRI) is an international numbering system from 0–100 which indicates the relative color rendering quality of a light source when compared to a standard reference source of the same correlated color temperature. It expresses the degree to which colors will appear "familiar" or "natural" under the light source being selected. In general, the higher the CRI number, the better the color rendering properties of the light source in question. The color rendering index of any two sources should only be compared if those sources have the same correlated color temperature.

For a more detailed explanation of color temperature and color rendering index see page 8.

Optron Fluorescent Lamps

- Highest System Efficacy (Lumens Per Watt)
- Excellent Color Rendering (80 CRI)
- Available in 4 colors-3100K, 3500, 4100K, 5000K
- Complete family of straight Optron and Optron Curvalume sizes

FLUORESCENT LAMPS

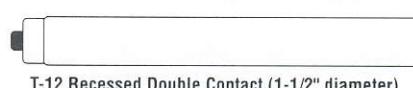

The bulb shape and size of a fluorescent lamp are expressed by means of a code consisting of the letter "T" (which designates that the bulb is "tubular" in shape) followed by a number which expresses the diameter of the bulb in eighths of an inch. They vary in diameter from T-5 ($\frac{5}{8}$ inch) to T-17 ($2\frac{1}{8}$ inches). In nominal overall length, fluorescent lamps range from 6 to 96 inches, which is always measured from back of lampholder to back of lampholder. For example, the actual overall length of the 40-watt rapid start T-12, 48 inch lamp is $47\frac{3}{4}$ inches. Circline lamps, which are circular, are available in four sizes: $6\frac{1}{2}$ inches, 8 inches, 12 inches and 16 inches outside diameter. There are also U shaped fluorescent types (Curvalume™) with T-8 and T-12 bulbs. U shaped types are measured for the distance between the ends. The overall length is measured from the face of the bases to the outside of the glass bend.

PREHEAT AND RAPID START

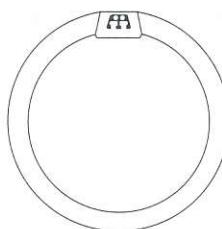

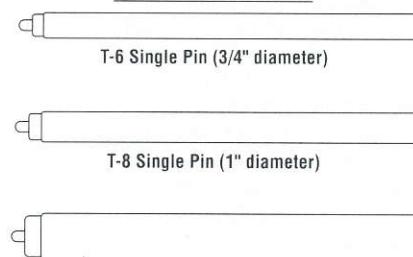

FE-18 Electronic Compact Fluorescent

HIGH OUTPUT AND VERY HIGH OUTPUT

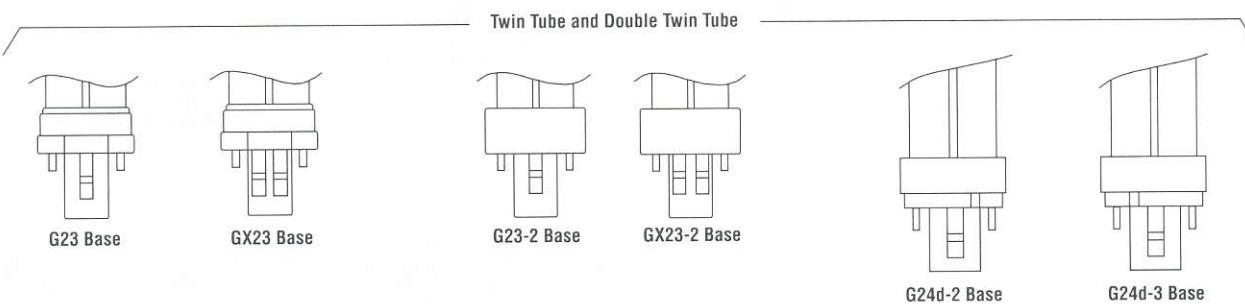

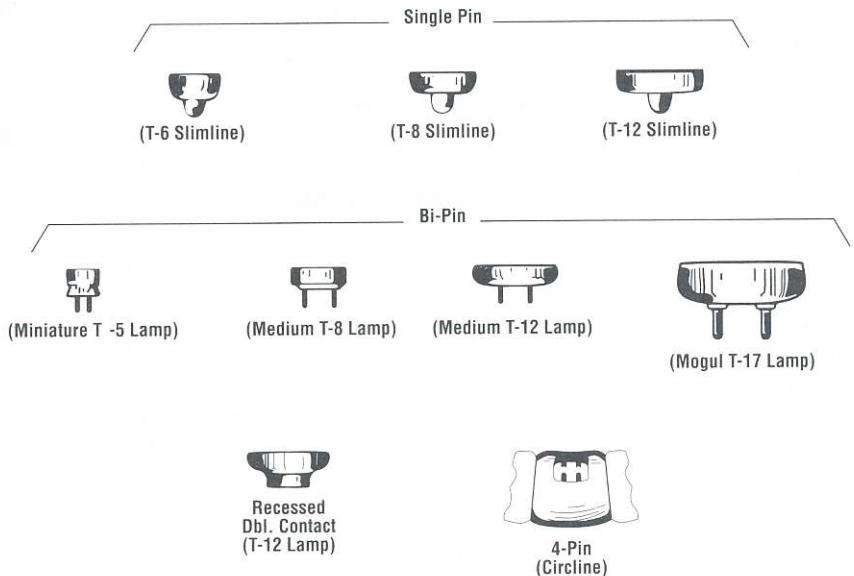

SLIMLINE INSTANT START

Bases

For Preheat and Rapid Start Lamps, four electrical contacts are required, two at each end of the lamp. This is accomplished in the standard line of lamps by the use of a miniature bipin for T-5 bulbs, medium bipin for T-8 and T-12 bulbs and mogul bipin for T-17 bulbs. In Circline lamps, the cathodes are connected to a four-pin base located between the junction of the two ends of the lamp. High Output and Very High Output lamps have recessed double contact (RDC) type bases. Slimline (Instant Start) lamps require only two electrical contacts, one at each lamp end and have single pin bases.

All compact fluorescent lamp bases shown have 2 pins and are designed for preheat operation, with lamps having an internal starter.

Footnotes

INCANDESCENT

1. Indefinite long life. Designed for life in excess of 10,000 hours. In service life depends upon burning conditions.
2. Average laboratory life is 200 hours for vacuum cleaner and 600 hours for sewing machine services.
3. Lightly inside frosted and side aluminized; M.O.L. exclusive of spring contact.
4. For diesel electric locomotives without voltage regulators.
5. Maximum contact to contact tolerance on RSC Base = $\frac{1}{16}$ ".
6. May not give satisfactory performance if any accessory lighting equipment touches the glass bulb.
7. When calculations are based on bare lamp lumens, do not use this lumen rating.
8. Average laboratory life in excess of 5000 hours.
9. For use only with heat-resisting connector and with bulb supported by bulb rim or metal shell of base.
10. Should not be used in equipment where base temperature will exceed 500°F.
11. High temperature base. Designed to operate in equipment where base temperature runs between 500°F — 570°F.
12. Designed for service other than illumination.
13. $\frac{3}{4}$ " inch circular window.
14. Burn only in porcelain sockets.
15. Should be shielded against moisture falling on bulb.
16. Not recommended for use in enclosed close-fitting housings.
17. Recommended burning position any within 60° of vertically base up or base down.
18. For use only in fixtures designed specifically for dichroic Reflector Lamps.
19. Burn within 25° of vertical base up.
20. Life dependent on service conditions.
21. Burning position 45° base down to horizontal.
22. Use only in fixtures designed to adequately dissipate heat from Lamp.
23. 3" Circular window.
24. Operation of Lamp in any position other than base up may result in some loss of protective coating.
25. A protective shield should be used external to the lamp.
26. In base up operation, heat may eventually deteriorate paper-lined or plastic sockets.
27. Made in Belgium.
28. Made in Canada.
29. Made in Japan.
30. Made in Korea.
31. Made in England.
32. Assembled in Mexico.
33. Burn only in porcelain or other socket approved for 150 watt PAR lamp.
34. Metal sleeve with approximately 6" flexible uninsulated leads. Leads not included in maximum overall length.
35. High temperature base. Retards seal deterioration where seal temperature exceeds 650°F.
36. For use where seal temperature does not exceed 650°F.
37. Life at rated voltage and at 650°F. maximum seal temperature.
38. Usually limited to intermittent burning.
39. Minimum bulb wall temperature 480°F.
40. Lamp internally fused.
41. $2\frac{1}{2}$ " braided lead w/lug.

42. Metal sleeve w/ $1\frac{1}{4}$ " - $1\frac{1}{2}$ " flexible leads.
Leads not included in M.O.L.
43. Minimum run. Check nearest Sylvania Sales Office for details.
44. This lamp should not be used in a location where water may be splashed on it.
45. Package quantity may change. See your Sylvania lighting representative for details.
46. Retrofit for 75R30/FL.

FLUORESCENT

1. May be operated at 100 watts (1000MA) same as F100T12/CW/HO.
2. Approximate initial lumens after 100 hours burning.
3. Ratings for Sylvania Circline lamps are based on operation in Rapid Start circuits. They will also operate on preheat circuits.
4. For operation on instant start circuits — special Sylcote treatment facilitates operation under all humidity conditions. Use only in fixtures equipped with Instant Start Ballasts.
5. 40W Rapid Start Lamps may be used in starter operated fixtures designed for 40W preheat lamps. Life rating for preheat service is approximately 15,000 hours average.
6. When base pins or R.D.C. bases are horizontal, window opening is centered downward or upward.
7. When base pins or R.D.C. bases are horizontal, window opening is centered to either side.
8. Average life rating at 12 hours burning per start is 18,500 hours.
9. Average life rating at 12 hours burning per start is 18,000 hours.
10. Average life rating at 12 hours burning per start is 28,800 hours.
11. For operation in fixtures designed only for 24", 30 watt, T-12 Fluorescent lamps.
12. Recommended only for use on 2-lamp, 30 watt rapid-start high power factor lead, indoor ballasts that meet ANSI standards. Not intended for use: (1) at lamp ambient temperatures below 60°F or in drafty locations, (2) on low power factor ballasts, (3) reduced current/reduced light output ballasts, (4) dimming ballasts, or (5) on inverter operated emergency lighting systems **unless equipment is specifically listed for use with 25 watt lamps**.
13. Recommended for use on one or two lamp 40 watt rapid start, high power factor, lead, indoor ballasts that meet ANSI standards. Not intended for use: (1) at lamp ambient temperatures below 60°F or in drafty locations, (2) on low power factor ballasts, (3) reduced current/reduced light output ballasts, (4) dimming ballasts, or (5) on inverter operated emergency lighting systems **unless equipment is specifically listed for use with 34 watt lamps**.
14. Recommended for use on two lamp 40 watt rapid start, high power factor, lead, indoor ballasts that meet ANSI standards. Not intended for use: (1) at lamp ambient temperatures below 60°F or in drafty locations, (2) on low power factor ballasts, (3) reduced current/reduced light output ballasts, (4) dimming ballasts, or (5) on inverter operated emergency lighting systems. Use one Thrift/Mate with one F40/SS in each two lamp circuit.
15. Thrift/Mate TM-33 and TM-50 lamps reduce wattage and light by approximately 33% and 50% respectively when used under specified conditions.
16. Recommended for use on one or two lamp high power factor, lead, instant-start, indoor ballasts that meet ANSI standards. Not intended for use: (1) at lamp ambient temperatures below 60°F or in drafty locations, (2) on low power factor ballasts, (3) reduced current/reduced light output ballasts, (4) dimming ballasts, or (5) on inverter operated emergency lighting systems **unless equipment is specifically listed for use with 32 watt or 60 watt lamps**.

Footnotes (continued)

FLUORESCENT (continued)

17. Recommended for use on one or two lamp high power factor, lead, 8-foot lamp, high output, indoor ballasts that meet ANSI standards. Not intended for use: (1) at lamp ambient temperatures below 60°F or in drafty locations, (2) on low power factor ballasts, (3) reduced current/reduced light output ballasts, (4) dimming ballasts, or (5) on inverter operated emergency lighting systems **unless equipment is specifically listed for use with 95 watt lamps.**
18. Recommended for use on 2-lamp high power factor, lead, 8-foot lamp, very high output, indoor ballasts that meet ANSI standards. Not intended for use: (1) at lamp ambient temperatures below 60°F or in drafty locations, (2) on low power factor ballasts, (3) reduced current/reduced light output ballasts, (4) dimming ballasts, or (5) on inverter operated emergency lighting systems unless equipment is specifically listed for use with 195 watt lamps.
19. Recommended for use on two-lamp high power factor, lead-lag, Pre-heat, indoor ballasts that meet ANSI standards and installed in open type fixtures. Not intended for use: (1) at lamp ambient temperatures below 60°F or in drafty locations (unstable operation or starting difficulties may be experienced below 60°F or in strong drafts); (2) low-power factor ballasts reduced current, reduced light output ballasts, dimming ballasts, or in inverter operated emergency lighting systems.
20. Average rated life is measured at 3 hour per start on 2-lamp, rapid start magnetic ballasts per IES recommended practice. Lamp life on single-lamp rapid start ballasts may be reduced.
21. Same as #13 with the following additions: Not to be used on electronic ballasts nor with Thrift/Mate lamps or other impedance modifying devices. SuperSaver Plus lamps may need approximately one minute to restart if a circuit interruption of less than 60 seconds occur.
22. Made in Canada.
23. Made in Japan.
30. Made in Korea.
31. Made in England.
32. Assembled in Mexico.

SYMBOLS

-  Rating given at 200MA operation.
-  This fluorescent lamp generates radiant energy which is most beneficial for plant propagation and enhances vegetative and reproductive growth of many plants for home and commercial use.
- Indicates aluminum base
-  Do not insert in household sockets
-  Burn base down
-  Candlepower
-  Burn base down to horizontal
- * Heat resistant hard glass
-  We suggest an energy saving product

FLUORESCENT (continued)

33. The life ratings of fluorescent lamps are based on 3 hr. burning cycles under specified conditions and with ballasts meeting ANSI specifications. If burning cycle is increased, there will be a corresponding increase in the average hours life.

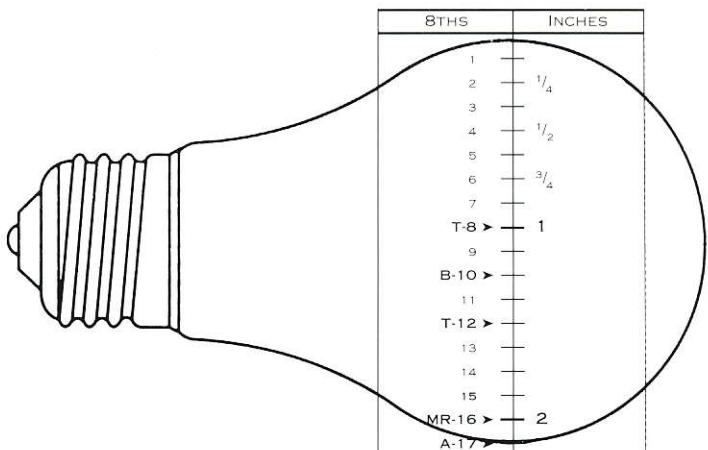

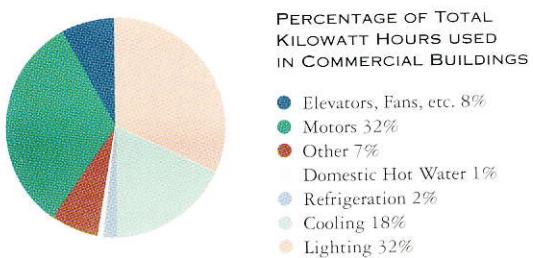

HID

1. Operates at 40 watts on H45 ballast, 50 watts on H46 ballast.
2. Operates at 75 watts on H43 ballast, 100 watts on H44 or H38 ballast.
3. H34 and H36 lamps are not interchangeable.
4. Lamps must be operated within 15° of vertical.
5. Standby feature not guaranteed beyond 24,000 operating hours.
6. For use where glare is a problem.
7. LU150/100 and LU150/55 lamps are not interchangeable.
8. The ULX880 lamp should not be used on any circuit other than 480V H36 mercury reactor.
9. For use where seal temperature does not exceed 350° centigrade.
10. OPERATE IN ENCLOSED FIXTURES ONLY which comply with UL Standard 1572 revised 12/88. Refer to fixture manufacturer data for compliance.
11. Use in equipment where gasket material is protected from all lamp radiation.
12. Check your Sylvania Representative for lamp availability.
13. Operate in open fixture if burned within 15° of vertical.
14. Use with 5000V pulse rated sockets only.
15. Use with 4000V pulse rated sockets only.
16. Lamps must be operated within 15° of horizontal.
17. Jacketed reprographical/photochemical lamp.
18. Unjacketed reprographical/photochemical lamp.
19. Operate lamp only with base horizontal to 15° below horizontal.
Do not operate with base above horizontal.

-  PAR lamps are suitable for indoor and outdoor use
-  Not recommended for horizontal burning
-  Do not burn in paper lined sockets
-  Field angle. 10% of maximum candlepower
-  Beam angle. 50% of maximum candlepower
-  Burn base up in porcelain sockets
-  Burn any position
-  Burn horizontal
-  New item
-  See your Sylvania Lighting Representative for product availability.
Product to be discontinued when inventory is depleted.

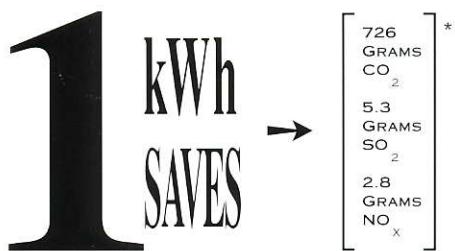

Notes

Lighting and the Environment

Lighting and Energy Use

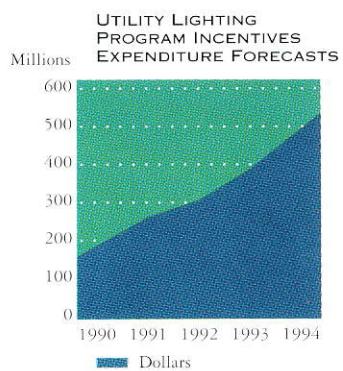

Lighting accounts for 20 to 25 percent of all electricity consumed annually in the United States. By reducing your electricity usage, you save money while decreasing the country's dependence on fossil-fuel fired electrical plants.

Lighting and the Environment

The use of electricity to power lighting systems requires the burning of fossil fuels in many of our nation's power plants. This causes the release of sulfur dioxide, nitrous oxide, and carbon dioxide, which are the chief components of acid rain, smog, and global warming.

* Air pollution emissions saved based on U.S. Average

Utility Incentive Programs

Many utilities now offer financial incentives or rebates to encourage the purchase and installation of energy efficient lighting. Rebates can amount to 100 percent the cost of upgrading. See your Sylvania Lighting Sales representative for details.
